

Lexmark Solution Composer

Intelligently adapted workflow solutions

Your time is valuable. Your resources are limited. And your budget is tight. But you still need to streamline your organization's manual and paper processes if you're going to be successful in creating a more efficiently run organization.

Lexmark Solution Composer can help. We can increase your company's efficiency by providing you with a simple, cost-effective way to build intelligently adapted workflow solutions in minutes—even if you don't know anything about programming. Not only do these solutions work on any solutions-capable Lexmark MFP, they also run on nearly any mobile device when used with Lexmark Mobile Capture.

Business Challenge

Whether you're optimizing an existing business process or putting new ones in place, you'll face several challenges as you work toward greater efficiency, including:

Creating more affordable workflow solutions in less time

Because developing an app typically takes days or weeks, it can be a slow, expensive proposition—especially when you multiply the cost by all of your different processes.

Using valuable resources more efficiently

Designing a workflow solution typically requires extensive programming knowledge, various development tools and IT certification—resources not always found within your company.

Making fewer mistakes on important processes

When you rely on manual and paper processes, the chance for human error increases—can ultimately drive away customers and slow down business.

Lexmark Solutions Composer Advantages

This software tool has an intuitive interface that simplifies the process of creating a workflow solution. Forget about spending hours going through a user's manual or waiting to hear from IT. If you can use the drag and drop method, you can build a solution based on your specific needs in no time at all.

Plus, you can create as many workflow solutions as you need and deploy them on a Lexmark MFP or mobile device.* With Lexmark Solution Composer, you can:

Improve productivity

By automating your manual or paper-based workflows, you can boost productivity throughout your company. That's because Lexmark Solution Composer frees up employee time and company resources that can be redirected toward growing your business.

Empower employees

Give your team a productivity tool that enables them to design their own digital workflow solutions in minutes—without having to work with IT and without using costly outside resources. Best of all, anyone can use it—even if they don't have any programming knowledge.

Reduce costs

Lexmark Solution Composer helps you cut costs by creating workflow solutions that are significantly less expensive than native app development and server or PC-based software. You'll benefit from high-quality solutions that do what you need—for less.

Create your solution in a snap.

Design

Simply choose the tasks you want to include in your solution by dragging and dropping them in the order you want them to appear. These include scanning actions, job confirmations and user prompts.

Validate

Make sure your solution is free from most types of errors by checking and quickly identifying any problem areas.

Save

Once you've designed and validated your solution, save it and you're done. Now you can brand it with your company icon and give it an easily recognizable name. Then, just install your app on any supported Lexmark MFP or mobile device. It's that easy.

Find out more.

Make a move today to increase productivity, empower employees and reduce costs across your organization. Contact your Lexmark representative or call us at 888-403-2803 to learn more about Lexmark Solution Composer.
